

2D ARRAYS SOLUTIONS

Solution 1:

Solution 2:

```
public class Solution {
    public static void main(String[] args) {
        int[][] nums = { {1,4,9},{11,4,3},{2,2,3} };
        int sum = 0;

        //sum of 2nd row elements
        for(int j=0; j<nums[0].length; j++) {
            sum += nums[1][j];
        }

        System.out.println("sum is : " + sum);
    }
}</pre>
```

Solution 3:

```
oublic class Solution {
  public static void main(String[] args) {
      printMatrix(matrix);
              transpose[j][i] = matrix[i][j];
      printMatrix(transpose);
```
